Physicist's Riddle Song

Physicist's Riddle Song

I gave my love a mass point without no "g"
And I gave my love a gyro without no "p"
I gave my love an ellipse without no "e"
And I gave my love a $PV=nR$ without no "T"

How can there be a mass point without no "g"
How can there be a gyro without no "p"
How can there be an ellipse without no "e"
And How can there be a $PV=nR$ without no "T"

In free space there's a mass point without no "g"
And a gyro not a-spinnin' has got no "p"
A degenerate ellipse has got no "e"
And at absolute zero there is no "T"
